With detailed illustrations and photographs, this book is a valuable resource for historians, modelers, and anyone interested in the military history of World War II.

The Development of French Tanks

The French were pioneers in the development of tanks, and the Renault FT-17 was one of the most successful tanks of World War I. This small,

agile tank was armed with a 37mm gun and a machine gun, and it was used by the French, American, and British armies.

In the interwar years, the French developed a number of new tank designs, including the Char B1, Char 2C, and the Somua S35. These tanks were larger and more powerful than the FT-17, and they were designed to meet the challenges of modern warfare.

The French Army in World War II

The French Army entered World War II with a large and well-equipped tank force. However, the French tanks were outmatched by the German Panzer divisions, and the French Army was quickly defeated in 1940.

Despite their defeat, the French tanks played a significant role in World War II. The Renault FT-17 was used by the Free French forces, and the Char B1 bis was one of the most powerful tanks in the world at the outbreak of the war.

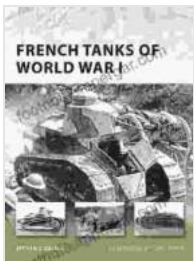

French Tanks in Action

French tanks saw action in a variety of theaters during World War II, including France, North Africa, and the Eastern Front. The Renault FT-17 was used by the French Army in the early stages of the war, and it was also used by the Free French forces in North Africa and Italy.

The Char B1 bis was used by the French Army in the Battle of France, and it was also used by the Free French forces in North Africa. The Somua S35 was used by the French Army in the Battle of France, and it was also used by the Free French forces in North Africa and the Eastern Front.
